Magnetic Chucks

SAV magnetic chucks provide a highly efficient and reliable solution for securing workpieces during milling and grinding operations. Their strong and uniform magnetic clamping force holds parts securely without introducing distortion. This makes them especially valuable when machining thin wall components or delicate parts where maintaining dimensional accuracy is critical. SAV magnetic chucks are engineered for durability and consistent performance, helping shops reduce setup time while maintaining the precision needed for demanding applications.

Low-Profile Milling Chucks

BISON low-profile milling chucks are designed to maximize accessibility while maintaining exceptional rigidity and gripping strength. Their compact design allows for greater tool reach and improved clearance in complex machining environments. Precision manufacturing ensures excellent concentricity and minimal runout, allowing machinists to push cutting performance while maintaining accuracy.

Toolholders

BISON toolholders provide the accuracy and durability needed to transfer spindle power efficiently to the cutting tool. Manufactured with tight tolerances and high-quality materials, they minimize runout and maintain consistent balance during machining. Customers rely

on BISON toolholders to improve surface finish, extend tool life, and ensure reliable repeatability.

Precision Machine Vises

BISON precision machine vises provide dependable mechanical workholding when magnetic clamping is not suitable. Built for strength and repeatable accuracy, they maintain consistent clamping force while resisting deflection during heavy milling operations. Their rigid construction and precise alignment ensure parts remain stable throughout the machining process.

Visit us at IMTS

BISON USA will be exhibiting at IMTS this year, and we invite you to stop by our booth 431670 to see our latest workholding and toolholding solutions in person. It's a great opportunity to explore products like our SAV magnetic chucks and precision milling solutions up close while speaking directly with our sales staff and engineering team. Whether you're looking to improve an existing process or explore new machining solutions, we look forward to connecting with you at IMTS.
